TurboVap® II

Building on Solid Foundations

The new TurboVap® II is built on the solid foundations of reliability and performance that made it the market leader for solvent evaporation. The modern design incorporates many new customer driven features for easier use and expanded functionality. TurboVap II still utilizes the highly efficient patented gas vortex shearing technology, which is synonymous with the TurboVap brand.

This modern design features many new enhancements, including a well-lit glass tank for much greater visibility of the sample, improved sensors with automatic end-point detection, real-time nozzle adjustment, user replaceable nozzles, easy access drain port, and a color, menu driven touchscreen for simple operation and monitoring. The system can be vented from the bench or placed in the fume hood. Because the footprint is noticeably smaller on this modern unit, less space is required.

Through the enhanced programming features of the new TurboVap II, flow gradients can be programmed to gradually increase as evaporation occurs, decreasing the amount of time it takes to reach the desired end-point, without splashing.

Like the traditional system, racks are available to accomodate both 50 mL and 200 mL evaporation tubes, with and with out the end point sensors. The new TurboVap II is designed so that it can be easily and quickly converted between the functionality of the traditional LV and II instruments if evaporation needs change, without purchasing a whole new unit.

For demanding applications involving the use of aggressive acids and bases we offer an upgraded version of the standard instrument which features a PTFE coated manifold and treated nozzles. This system is resistant to the following substances.

- » Trifluoroacetic acid (TFA) 2%
- » Trichloroacetic acid (TCA) 2%
- » Formic acid 5%
- » Acetic acid 5%
- » Butyric acid 5%
- » Phosphoric acid 5%
- » Hydrochloric acid 0.1 M
- » Nitric acid 0.1 M
- » Ammonium Hydroxide 5%
- » Triethylamine (TEA) 5%

Lit glass tank

Improved sensors

Smaller footprint

Drain port for water bath

Built in colour 7" touchscreen control

Able to store methods for regular use

Visual and audible alarm on evaporation completion

Sleep mode with automatic start-up

Ambient to 90 °C water bath temperature

Simple and intuitive software

Built in ventilation for installation on benchtop

Full sample visibility for real time monitoring

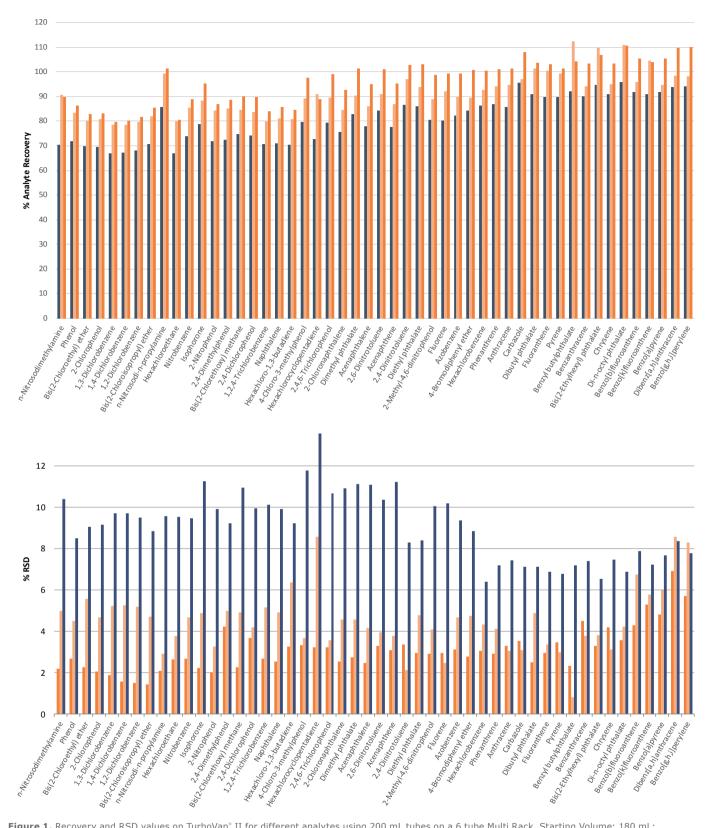

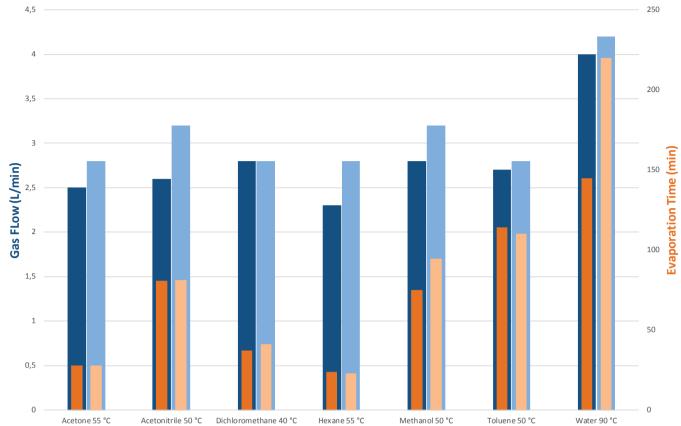

Figure 1. Recovery and RSD values on TurboVap® II for different analytes using 200 mL tubes on a 6 tube Multi Rack. Starting Volume: 180 mL; Solvent: dichloromethane; Fixed Gas Flow: 2.8 L/min (10 psi on old TurboVap); Analyte Spike Amount: 20 μg; Final Extract Volume: 1.0 mL.

Ordering Information

Part Number	Description		Part Number	Description	
System		Evaporation Tubes			
415001	TurboVap II (includes 415222 manifold, but no rack). Rack must be ordered separately.		C128506	Evaporation Tube TurboVap II 200 mL, 1 mL End-Point 12-pack	
416201	TurboVap II - PTFE Coated Manifold (Rack must be ordered separately)		C128507	Evaporation Tube TurboVap II 200 mL, 0.5 mL End-Point 12-pack	800g. 250.
Gas Manifold		3	C128508	Evaporation Tube TurboVap II 50 mL, 0.5 mL End-Point 12-pack	500 000 000 000 000 000 000 000 000 000
415222	TurboVap II Manifold (6 Nozzles)				U
415830SP	TurboVap II Manifold (6 Nozzles) - PTFE Coated (for upgrade of 415001)		C128511	Evaporation Tube TurboVap II 50 mL, 1 mL End-Point 12-pack	90 10 8
Multi Racks			6450745	Evaporation Tube TurboVap II 50 mL,	Ü
415100	TurboVap II Multi Rack with End-Point Sensors (6 Positions, 200 mL Tubes)		C128512	Centrifuge 12-pack	
415535	TurboVap II Multi Rack with End-Point Sensors (6 Positions, 50 mL Tubes)				
415494	TurboVap II Multi Rack without End-Point Sensors (6 Positions, 50/200 mL Tubes)	a co
